

# Prevalent & SecZetta

Adjust third-party identity access based on real-time company risks

Most businesses rely on third parties to operate, which often means granting third-party employees access to systems and data. However, vendor and supplier representatives often receive access without consideration for the risk posed by their organizations. This disconnect between third-party identity management and company-level risk can open the door to data breaches, compliance violations and other business disruptions.

## Tune Third-Party Employee Access to Company Risk

SecZetta and Prevalent offer an integrated third-party identity and risk management solution that empowers IT security teams with contextual, risk-based access control for vendor and supplier employees.

With this integration, customers use the SecZetta Third-Party Identity Risk solution to automatically set and adjust vendor representative access based on security incidents, exposed credentials, compliance violations, and other company-level risks identified by the Prevalent Third-Party Risk Management Platform.

### Key Benefits

- Make informed identity management decisions by correlating risk scores between third-party companies and employees
- Respond quickly to external threats with continuous vendor risk intelligence
- Take a simple, unified approach to third-party identity, lifecycle and risk management

*The Prevalent Third-Party Risk Management Platform provides risk insights to help IT security teams make better informed third-party employee access decisions.*

## How It Works

### Secure Third-Party Employee Onboarding

Third parties onboard employees in the SecZetta solution, where administrators can also access company-level risk scores from Prevalent. All third-party employees inherit the same baseline score, which can be adjusted for each individual based on their role or other attributes. SecZetta can then pass this data to an IAM solution for further action.

### Build a Comprehensive Vendor Profile

Prevalent provides comprehensive third-party intelligence to build authoritative company profiles, including industry and business insights, beneficial ownership, 4th-party relationships, and more.

### Risk Scoring & Analysis

The combined solution enables customers to quickly gauge vendor risk impact with straightforward A (high risk) to E (low risk) domain-level ratings.

### Dynamically Adjust Access Based on Organizational Risk

SecZetta can adjust risk scores in concert with Prevalent risk assessment results and continuous threat monitoring data, enabling IT security teams to fine-tune third-party employee access as their companies' risk levels change.

### Automated Workflow for Updating Scores

SecZetta pulls recent, company-level risk data from Prevalent, automatically applies a risk rating to all employees, and then dynamically adjusts each individual's risk score as needed.

## About Prevalent

Prevalent takes the pain out of third-party risk management (TPRM). Companies use our software and services to eliminate the security and compliance exposures that come from working with vendors, suppliers and other third parties. Our customers benefit from a flexible, hybrid approach to TPRM, where they not only gain solutions tailored to their needs, but also realize a rapid return on investment. Regardless of where they start, we help our customers stop the pain, make informed decisions, and adapt and mature their TPRM programs over

## About SecZetta

SecZetta is the leading provider of third-party identity management solutions. Our solutions enable organizations to execute risk-based identity access and lifecycle strategies for diverse non-employee populations. Because the solution suite is purpose-built, it's uniquely able to manage the complex relationships organizations have with non-employees in a single, easy-to-use application that simultaneously helps facilitate commercial initiatives, support regulatory compliance, and reduce third-party risk.
