

Cyber & Business Monitoring Service

Gain immediate, actionable insights into vendor data and business risks

Your vendors, suppliers and other third parties present tempting targets for cyber criminals seeking to gain access to your network. With vendor-related breaches on the rise, it's critical to not only conduct periodic, "inside-out" third-party assessments, but also validate assessment data on a regular basis. The Prevalent™ Cyber & Business Monitoring Service complements assessments with frequent, "outside-in" intelligence reports on potential IT and business exposures to provide a complete picture of third-party risk.

Gain a strategic view of vendor-related risk

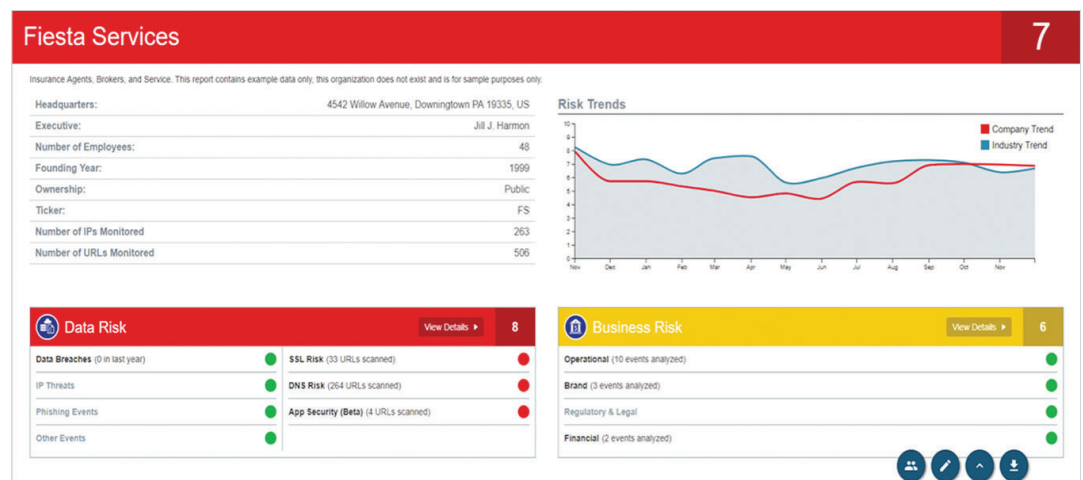

The Prevalent Cyber & Business Monitoring Service delivers immediate notification of high-risk vendor issues, prioritization, and remediation recommendations. By combining data security and business risk monitoring, Prevalent moves beyond tactical network health reporting to reveal operational, financial, legal and brand risks.

Part of the cloud-based Prevalent Third-Party Risk Management Platform, the Cyber & Business Monitoring Service is integrated with inside-out, questionnaire-based assessments to deliver a comprehensive, 360-degree view of vendor security and compliance.

Key Benefits

- Increase risk visibility by filling gaps between point-in-time assessments
- Gain a holistic view of both vendor data and business risks
- Rely on comprehensive, trusted and transparent scoring
- Get prescriptive guidance and remediation recommendations
- Prioritize and focus on the most significant risks

The Prevalent Third-party Risk Management Platform combines cyber and data threat intelligence with business-level risk insights for an optimal view of vendor risk.

Cyber Threat Intelligence

Prevalent combines native vulnerability scanning with external cyber threat intelligence from online sensor networks, global threat databases, anti-virus users, and dozens of collaborating security partners. You gain deep risk insights gleaned from more than 27 billion URLs, four billion IPs, 600 million domains, and all public IPv4 addresses – plus data on IP threats, phishing events, and data breaches.

Business Intelligence

Only Prevalent combines technology, data analytics, and analyst insights to evaluate business risk. We collect, categorize and score risk based on commercial due diligence, financial analysis, and cyber threat intelligence. Our analysts not only have backgrounds in national security and cyber threat intelligence, but also provide geopolitical context and fluency in seven languages.

Key Features

AI-Powered Media Analytics Platform: Tap open-source vendor intelligence from 450,000 sources.

OSINT Collection: Collect business intelligence information for inherent risk scoring.

Risk Scaling: Quickly gauge risk via straightforward numerical scoring and high/medium/low risk scaling.

Risk Relevance: Weight risks in the context of a vendor’s service to your business.

Inherent Industry Risk: Leverage industry risk intelligence as a proxy for vendors with sparse data.

Alert Notifications: Tailor alerts based on risk type, risk threshold, vendor, and/or vendor group.

Reporting: Meet different stakeholder needs with customizable email, Excel, PDF and in-application reports.

Filtering: Filter and sort on risk type, score, date and/or vendor name, criticality or group

Tiering: Categorize vendors by risk tier, enabling prioritization by criticality and severity.

Remediation Recommendations: Receive and share actionable remediation guidance with vendors for specific SSL, DNS and application security risks.

Integrated Monitoring & Survey Scores: Complement survey-based risk scoring for a complete, 360-degree view of vendor-based risks.

TPRM Platform

The Prevalent Cyber & Business Monitoring Service is part of the industry’s only purpose-built, unified third-party risk management platform.

Assess

Automate the process of collecting, analyzing, remediating and reporting on vendor evidence.

Share

Partner with vendors through shared repositories of validated questionnaires with supporting documents.

Monitor

Make better risk-based decisions with technical insight into threats, breaches and network health, combined with a strategic view of business risks.

Consult

Plan, optimize and mature your TPRM program with professional services, or take advantage of managed services options.

“Prevalent leads the pack with a third-party risk management platform ... best for companies that want one TPRM tool with integrated cyber-risk ratings.”
